

# GAURANGKUMAR PATEL

SOFTWARE ENGINEER | BACKEND & FULL-STACK | PHP/LARAVEL | REST APIs | SQL | INTEGRATIONS

London, UK | +44 7887 172859 | gaurangpatel3056@gmail.com

LinkedIn | GitHub | Portfolio

Full UK right to work - no sponsorship required | Notice period: 4 weeks | London / hybrid / remote UK

## PROFESSIONAL PROFILE

Software Engineer with 5+ years of commercial experience and around 5 years of Laravel development experience, including 4+ years delivering and supporting production Laravel applications. Backend-first engineer with strong hands-on experience across PHP/Laravel, Yii2, REST APIs, MySQL, React.js, API-driven client-server systems, third-party integrations, scheduled automation, SQL/stored-procedure optimisation, Redis/Memcached caching and production troubleshooting. Delivered software across property management, financial services, B2B commerce, employee mobile platforms, reservations and high-traffic retail. Experienced in legacy modernisation, complex multi-role approval workflows, performance engineering, code reviews, release support and AI-assisted debugging/refactoring while retaining full ownership of code quality and technical decisions.

## TECHNICAL EXPERTISE

**Backend Engineering:** PHP 7/8, Laravel, Yii2, Core PHP, CodeIgniter exposure, Python/Flask, OOP, MVC, RESTful APIs, API-first and service-oriented architecture, modular backend services, authentication/authorisation, validation, exception handling, webhooks, scheduled commands/cron and background processing.

**Frontend:** React.js, JavaScript, jQuery/jQuery UI, AJAX, Blade, HTML5, CSS3, Bootstrap, Tailwind CSS; commercial Vue.js integration exposure with backend/API ownership.

**Data & Performance:** MySQL/MariaDB, SQLite, Redis, Memcached, schema design, indexes, EXPLAIN/query profiling, stored procedures, functions, triggers, views, pagination, caching strategies, bulk import/export, database migration/synchronisation and data-processing workflows.

**Cloud, Security & Integrations:** AWS S3, AWS KMS, Amazon SES, EC2 access, SharePoint/Microsoft Graph, Active Directory, OAuth2, JWT, Firebase FCM, SMS APIs, eBay Trading API, Stripe integration support, AES-based encryption for sensitive fields and webhook-triggered automation flows.

**Engineering Tooling & Delivery:** Git, GitHub, GitLab, SVN, Composer, npm, Postman, Swagger/OpenAPI, Laravel Debugbar, Telescope, Linux, Apache, JMeter, manual/API testing, QA/UAT, merge requests/code reviews, CI/CD exposure, Docker fundamentals, Asana, Slack and Basecamp.

**AI-assisted Engineering:** Practical use of ChatGPT and GitHub Copilot for debugging, refactoring, solution exploration and documentation, with manual validation and responsibility for understanding and explaining the resulting code.

## PROFESSIONAL EXPERIENCE

### Founder & Backend Software Engineer (Part-time)

Dec 2025 - Present

*GlistPro | London, UK | Independent SaaS product development*

*Technologies: PHP 8.x, Laravel 13, MySQL, Blade/Inertia/React, Tailwind CSS, Redis, Git*

- Defined product requirements and a modular SaaS architecture for reusable eBay listing templates, product data mapping and future marketplace integrations.
- Designing the relational data model, backend service boundaries, secure seller workflows, template processing, validation and integration-ready interfaces, with planned caching and scheduled/background processing.

### Retail & Post Office Assistant

Dec 2025 - Present

*UOE UK Limited | London, UK*

- Handle high-volume financial, retail and parcel transactions accurately while resolving customer issues and supporting branch operations; selected for promotion to Trainee Team Lead effective October 2026.

### Software Developer & Operations Support (Part-time)

Jul 2025 - Nov 2025

*JAH Product Ltd | United Kingdom*

*Technologies: Python, Flask, SQLite, JavaScript, HTML/CSS, Microsoft Graph/SharePoint, Excel data integration, eBay Trading API*

- Built Mini Lister, an internal listing-automation tool that synchronised SharePoint/Excel product data, generated consistent HTML content and submitted eBay listing revisions through the Trading API.
- Implemented validation, status tracking, logging and retry/error handling around the data pipeline, using direct warehouse/eCommerce operational knowledge to prioritise practical automation improvements.

### Software Engineer

Aug 2020 - Apr 2025

*E2logy Software Solutions Pvt. Ltd. | Ahmedabad, India*

*Technologies: Laravel, Yii2, PHP, React.js, MySQL, Redis/Memcached, REST APIs, AWS, OAuth2/JWT, GitLab*

- Designed, developed and maintained production web applications and API backends across property management, finance, B2B commerce, employee mobile apps, reservations, IoT and high-traffic retail platforms.
- Built decoupled API backend services for Android/iOS and web clients, including authentication, directory/user synchronisation, scheduled automation, file-processing workflows, push notifications and third-party integrations.
- Improved database and application performance using indexes, EXPLAIN/query profiling, stored-procedure refactoring, field reduction, pagination, Redis/Memcached caching, code refactoring and targeted load testing.
- Contributed across the full delivery lifecycle: estimation, task breakdown, implementation, merge-request/code review, Dev testing, QA/Staging, client UAT, deployment and production support.
- Led day-to-day work for two developers on Orion Haus under a senior project manager, assigning tasks, clarifying requirements, resolving blockers, reviewing MRs, merging approved changes and uploading builds.
- Completed high-priority changes ahead of schedule, including the VivoCity Vue-integrated onboarding/approval work; contribution was recognised in the team's Milestone Marvel Certificate.

### SELECTED COMMERCIAL PROJECTS AT E2LOGY

---

#### VivoCity - Retail / Tenant Operations Platform

*Yii2, MySQL, stored procedures, jQuery UI, Vue.js integration, Memcached, Debugbar*

- Designed and implemented reusable two-tier and three-tier approval workflows across a 13-role permission model, with role-aware views, edit/resubmit paths, granular statuses, full audit history and email notifications for every stage change.
- Integrated client-supplied Vue.js forms into a legacy Yii2/jQuery UI application by building the backend APIs, authentication checks, database design/CRUD and workflow logic; completed the high-priority onboarding module ahead of the planned timeframe.
- Refactored static role conditions and repeated logic into reusable configuration, shared classes/traits and stored-procedure-driven permission scripts, while using Memcached for stable API responses with key-based invalidation.

#### ShopFarEast - High-Traffic Retail & Rewards Platform

*Laravel, MySQL, Redis, Apache, JMeter, cron/scheduled jobs*

- Diagnosed and stabilised production behaviour during event spikes reported by IT monitoring at roughly 10k+ requests per minute, reducing timeouts/errors through Redis response caching, rate limiting, database/code optimisation and Apache/load-handling changes.
- Used JMeter and server/IT monitoring feedback to validate performance under load and support smoother campaign and sale-event traffic.

#### AMPM - Multi-country Reservation Platform

*Yii2, MySQL, stored procedures, JavaScript/jQuery, Debug profiling*

- Reduced a data-heavy reservation listing from more than 2 minutes to under 30 seconds by profiling queries, adding indexes, refactoring stored procedures/joins, reducing selected fields and repeated queries, removing unnecessary loops/inline-edit payloads, and applying pagination/caching across 10k+ records.
- Used AI assistance selectively during stored-procedure/code refactoring, then verified behaviour and performance through query/debug profiling and manual regression testing.

#### Digital Workplace / Link Workplace - Employee Mobile Platform

*Laravel REST APIs, MySQL, SharePoint/AD, JWT/OAuth2, Firebase FCM, AWS S3, Telescope, Swagger/OpenAPI*

- Developed and supported a separate Laravel API backend serving Android/iOS employee applications for leave, workplace services, organisational data and internal workflows; synchronised Active Directory users into MySQL through scheduled commands.
- Automated voucher/document export: generated CSV plus up to ~10 associated files, packaged ZIP archives, emailed results, retried failed deliveries, tracked send state and removed successfully delivered server files through hourly/daily scheduled jobs.
- Implemented push-notification flows with Firebase/FCM and later OAuth-based token handling, webhook-triggered automation integrations, module-level logging and production exception email alerts; protected sensitive fields using MySQL AES encryption with Base64 representation and environment-managed keys.

#### HBSYSTEM - Financial / Stock-Market Platform Modernisation

*Laravel, React.js, MySQL, stored procedures, cron/commands, Amazon SES, SMS API*

- Modernised legacy Core PHP functionality and supporting Python scripts into Laravel backend services and React.js flows across broker, client, reporting, portfolio and trading-related modules, validating calculations against the legacy system for accuracy.
- Built command/cron-driven database migration and backup workflows that invoked stored procedures to transform legacy client exports into the new schema and emailed reconciliation reports covering tables, affected rows and errors.

## SELECTED COMMERCIAL PROJECTS AT E2LOGY - CONTINUED

---

### Orion Haus - Multi-brand Property Management Platform

Laravel, React.js, MySQL, Redis, AWS S3/KMS, REST APIs

- Designed shared-code multi-brand/property behaviour driven by domain and slug configuration, enabling different brands and properties to render distinct content, imagery, SEO metadata and visual settings from a common codebase.
- Built backend APIs and reusable frontend integration patterns for property/listing workflows, implemented Redis response caching with update-driven key invalidation, supported AWS S3/KMS usage, and maintained an existing Stripe payment integration.

### Wetruss - B2B Agricultural Marketplace

Laravel, React.js, MySQL, REST APIs, OTP/token auth, Excel/CSV import-export

- Delivered backend APIs and React integration for admin, buyer and seller journeys, including OTP/token login, role-specific dashboards, account approval, catalogue/inventory, cart and bulk-order workflows.
- Implemented seller product uploads from CSV/Excel with validation and database import, plus approval and email-notification flows; contributed to delivery of the initial platform in roughly four months.

### IIT Roorkee - Citizen Commerce Module

Laravel, React.js, MySQL, mobile APIs, JWT/OTP, Firebase FCM

- Added a new commerce module to an existing application, including seller role/permissions, product CRUD, cart/order workflows, mobile APIs, Hindi/English support and push notifications on order events.
- Refactored static legacy conditions into reusable configuration/components and implemented React.js forms while supporting the Laravel Blade administration panel.

### LendLease - Retail / Mall Platform Support

Yii2, MySQL, jQuery UI, stored procedures, Debugbar

- Developed and supported new modules on a related Yii2 retail platform, refactoring repeated code, improving SQL/application performance and resolving production/support issues across legacy functionality.

### Daikin & HIK Vision - IoT / Camera Integrations

Yii2/PHP, JavaScript/jQuery, Chart.js, MySQL/NoSQL data flows, REST APIs

- Upgraded legacy PHP/JavaScript dependencies on an IoT reporting platform, removed deprecated/CDN usage, introduced responsive Chart.js visualisations and verified affected modules after the upgrade.
- Built an HIK Vision API proof-of-concept that called parameterised camera endpoints and returned live-stream URLs for browser playback.

## EARLIER EXPERIENCE & PROFESSIONAL DEVELOPMENT

---

### Professional Development - Laravel & Backend Projects

Oct 2019 - Jul 2020

*Independent | Gujarat, India*

- Built Laravel practice/demo applications covering MVC, CRUD, authentication, REST APIs, database design and reusable backend patterns, forming the foundation for subsequent commercial Laravel work.

### Management Trainee

Jun 2019 - Sep 2019

*Razor Solutions Pte Ltd | Singapore*

- Supervised day-to-day operations across 16 food-court shops, coordinating vendors/staff and resolving customer and operational issues.

### Junior Web Developer

Dec 2018 - Jun 2019

*Assign Us IT Solutions | Gujarat, India*

- Developed PHP/MySQL web applications using Core PHP with CodeIgniter exposure, JavaScript/jQuery/AJAX and Bootstrap, including CRUD, authentication, catalogue, cart and appointment workflows.

### PHP Trainee (Academic Project)

Jun 2017 - Apr 2018

*Saurabh Web Solution | Gujarat, India*

- Built a dynamic PHP/MySQL website and administration panel using OOP, CRUD, relational joins, validation and JavaScript/jQuery.

## EDUCATION & CERTIFICATIONS

---

**Master of Science (Information Technology)** - Sardar Patel University, Gujarat, India | 2016 - 2018

**Bachelor of Computer Applications (BCA)** - Sardar Patel University, Gujarat, India | 2013 - 2016

**micro1 Global Certification - PHP Backend Developer** | May 2026 - AI-evaluated assessment covering PHP backend development, APIs, integration and problem solving.

**HackerRank Software Engineer Certificate** | Mar 2025 - Technical assessment covering algorithms, SQL and REST API integration.

**Deloitte Australia - Data Analytics Job Simulation (Forage)** | Feb 2026 - Practical data analysis, classification and business-insight communication tasks.
